

Cloud IT Final Project

Mode of Submission – In Moodle

Total Marks – 100

Date of Submission – August 15th 17:00

Develop and deploy a full stack application (Mobile Application or a Website) with minimum 5 pages navigation.

You are free to choose your own business Idea.

Example – Mobile Application for booking tickets

Web application to a college campus

Simple gaming system

Must Have in the Project

- Your project must be implemented in a Microservice Architecture.
- Microservice with FrontEnd + Backend
- Images for the frontend, backend data must be stored in cloud-based storing account. Eg., Azure Blob Storage
- Use REST API service to create communication between the frontend and the backend.
- Docker to create containers.
- Implement Container Orchestration – Kubernetes or any cloud services e.g., Azure Kubernetes Services
- Host the entire website in any cloud services or application like Heroku, Netlify.
- Implement atleast one Serveless Component.

How to Submit your Project?

Create the entire application in VSCode or any text editor.

Host in any cloud services.

Option 1. Upload the entire code base in the moodle along with the hosted link.

Option 2. Push it to you Git account, share the Git link and the hosted link in the moodle.

Note

For this module you must use any one cloud service. Since we used Azure in the classes, it doesn't mean you have to use only Azure. You can look for better options and use it.

In the module we used docker and Kubernetes tool for implementing containers and container orchestration. You can use any cloud-based tool or open-source to implement these concepts.
